Food Shopper

Bringing home the bacon or ham has as the case may be is not as much of an adage as we might think. Both come from the new pork. That is, scientific breeding has produced pork that has less fat and more lean meat. Pork is an excellent source of protein and the most important of the Vitamin B group (thiamin, riboflavin, niacin, B6 and B12). It is also a good source of iron and phosphorous.

October PORKFEST is in progress right this minute and with it comes some great buys at your retain grocery store. There will be all cuts of pork roasts, steaks, and chops and ham and bacon.

Talking about BACON, lean or fat, which is your choice? If crispy or chewy bacon is preferred, make your choice at the packaged meat counter. Crispy or chewy bacon depends on the thickness of the slice and distribution of the lean. Thick slices become chewier pieces than thin slices. Now due to new packaging regulations for bacon, there is a large enough window provided to see what is being purchased. The regulation requires that all bacon packages have a transparent area, at least 1½ inches wide revealing at least 70 percent of a representative slice. A regular one pound package contains 20 to 22 slices. A one pound package of thick sliced bacon usually contains about 12 slices. When fried, bacon with several strips of lean concentrated in fewer but larger sections will tend to be more chewy.

Ham is available in a variety of cuts and there are as many kinds as there are breeds of hogs. Ham may be bought with some, all, or none of the skin, fat and bone removed. It may be a whole or just a portion. A **bone in whole** ham may have a center roast or center slices cut from it, with remainder sold as a rump (butt) portion and the shank portion.

"Half" means that no slices have been removed, and "portion" means sliced have been removed. So, your ham may be shank half or butt half or shank portion or butt portion. The shank usually includes the ham hock, so good for seasoning other foods or cooked and eaten in a pork casserole.

Curing ham, a cured ham is a fresh ham that has been treated with special curing ingredients, usually salt, sodium or potassium nitrate and/or nitrite and sugar. The liquid curing mixture is injected into fresh ham before smoking. To be labeled "Ham," the ham must then be shrunk back to its fresh weight. If it is not back to it's fresh weight, it must be labeled "Ham-Water Added: If the added moisture is more than ten percent, it must be labeled "Imitation Ham."

A smoked ham has been subjected to the smoke of a special wood for that characteristic flavoring. If country style ham (sometimes labeled Smithfield is your favorite, this is a dry salt cure ham that has been smoked slowly and dried for a long time as was done in the colonial days. To remove the excess salt, this kind of ham must be soaked in water before it is cooked.

Cured hams are available in two styles. Fully cooked ham will be marked "cooked," "fully cooked," "ready to eat" or "ready to serve." This ham may be sliced and served cold; or if you prefer, heat it to an internal temperature of 140 degrees. Cooked before eating hams should be baked until your meat thermometer reads 160 degrees. Fresh (uncured) cuts should be cooked to an internal temperature of 170 degrees. By all means use a meat thermometer, if possible.

Now, consider October PORKFEST and bring home some ham and bacon plus other good pork cuts available now because of good supplies. Many farmers are sending their hogs to market now, and selling their feed grain that they grow. This means that supplies will be strong this fall and diminishing by early next year. So, stock up now!
